

Case Study Landfill, Northern U.S.A.

No matter **what** the
“**Case**” may be...

We **provide** the
missing **piece**!

Results

- Effectively controlled odors.
- Reduced the public complaints.
- Worked within budget constraints.
- Avoided litigation.

Problem

A landfill located in the Northern USA has been a constant source of odor complaints for many years. Recent court action and public outcry have finally created a willingness to solve this odor problem.

Solution

Ecolo proposed various systems to treat the odors on this site that is approximately 7 kilometers in circumference. Due to budgetary restrictions, the landfill started by implementing the recommended program in stages. The initial stage was the implementation of a portable EP system with portable nozzles mounted on poles. This system has a configuration of nozzles placed around the area of the workface that was currently receiving waste materials.

Conclusion

Site personnel and management noted a great improvement in the odor level and an ensuing decrease in complaints.
