“**Case**” may be...

We **provide** the  
missing **piece!**

## Results

- Odor neutralization.
- Neighborhood and political complaints subsided.
- Fines and Ministry warnings eliminated.

## Problem

A large, privately- owned transfer station located in an industrial area was receiving continual complaints from the Ministry of Environment and Energy (M.O.E.E.) filed by surrounding businesses. After the transfer station had received numerous fines and warnings due to odor complaints, the M.O.E.E. recommended that the company contact HLS Ecolo for assistance.

## Solution

This was a critical situation and the transfer station required immediate relief. HLS Ecolo quickly arranged for a fogger to be used at the wet garbage area, as an interim solution, dispensing AirSolution #23. Within days, complaints reduced and neighboring companies phoned to inquire and compliment the company about the pleasant change. Ecolo then installed an EP-60 with 24 nozzles. The height of the transfer station ceiling was 50 feet. To provide easy access to the nozzles, a newly designed pulley system was installed to raise and lower the nozzles for servicing. Each line had a winch at either end of the building so a cable could be used to raise and lower the nozzles. This left each line in a stable state of suspension while in operation. The system was fully installed and the management extremely happy that the odor problem was now under control and complaints were eliminated.
